

UNIVERSIDADE
SÃO FRANCISCO

Da TCT à TRI usando o Modelo de Rasch: GfRI

Dr. Ricardo Primi

Programa de Mestrado e Doutorado em Avaliação Psicológica
Universidade São Francisco

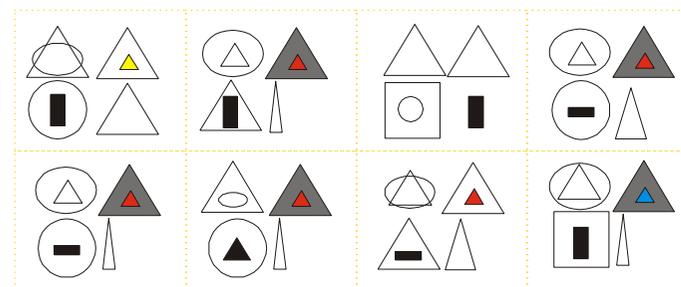

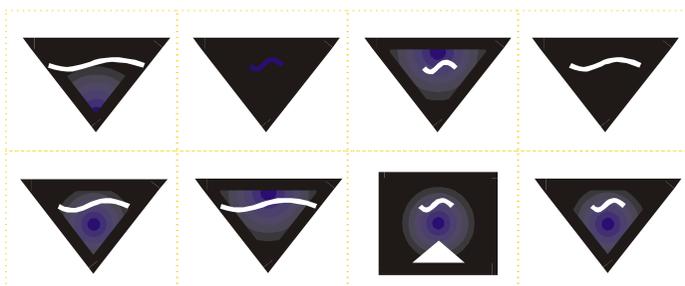

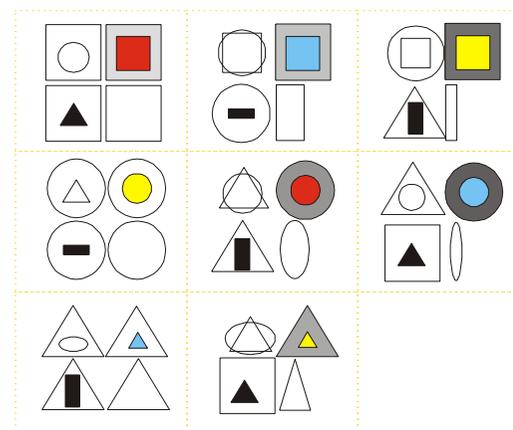

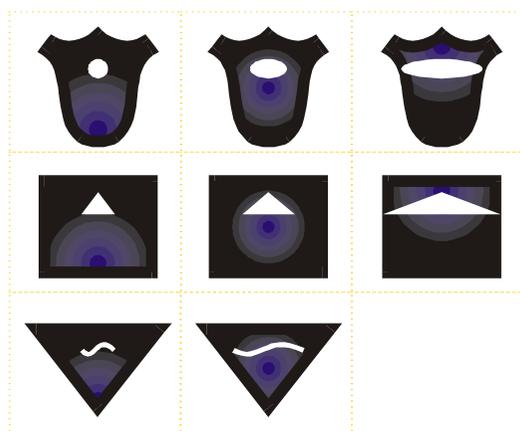

Workshop ministrado na Universidade do Minho, Instituto de
Educação e Psicologia, Braga, Janeiro, 2008

Exemplo GfRI

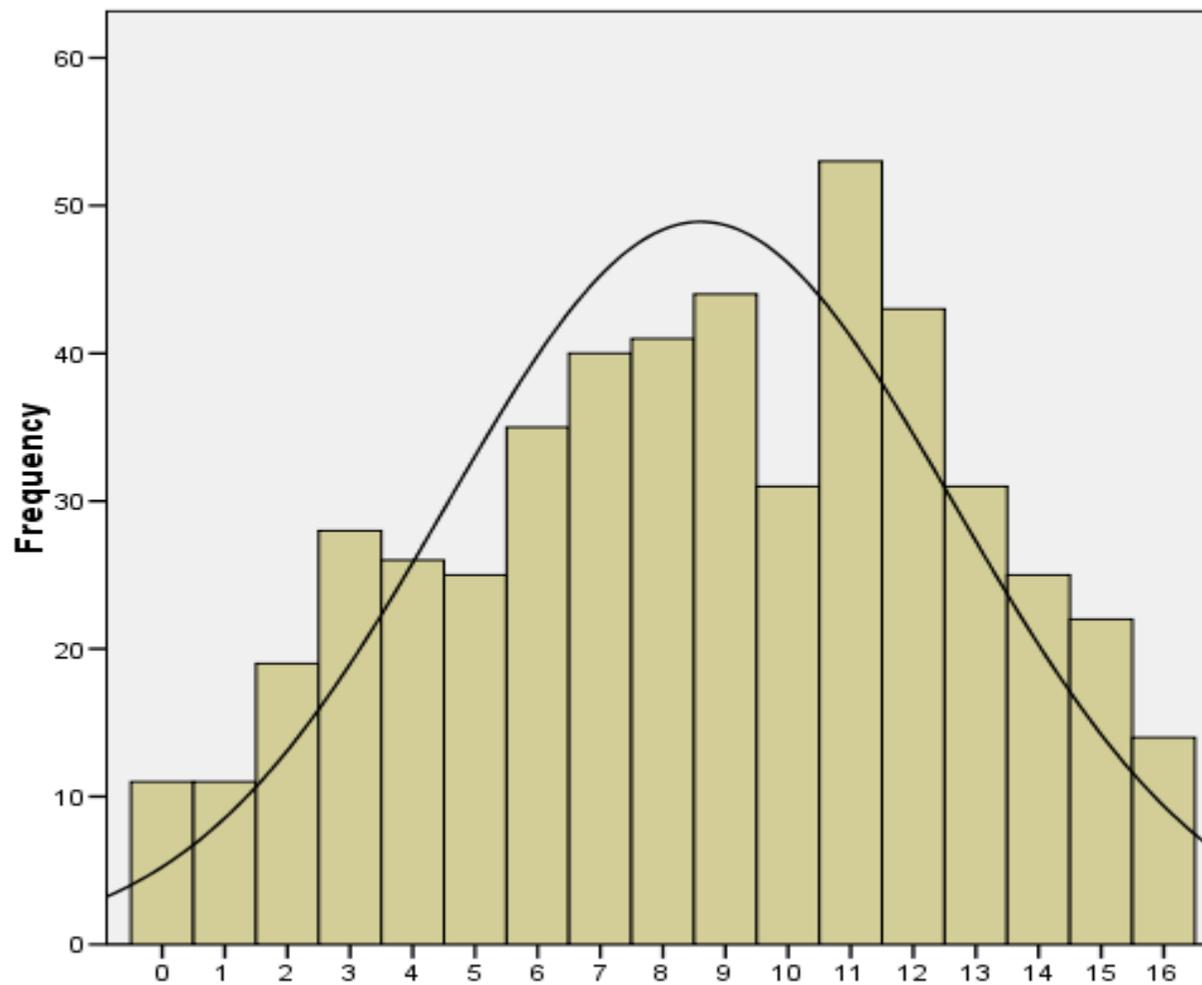

Teste de medida do raciocínio GfRI

16 Itens de raciocínio analógico com figuras geométricas arranjadas em matrizes com oito alternativas de resposta

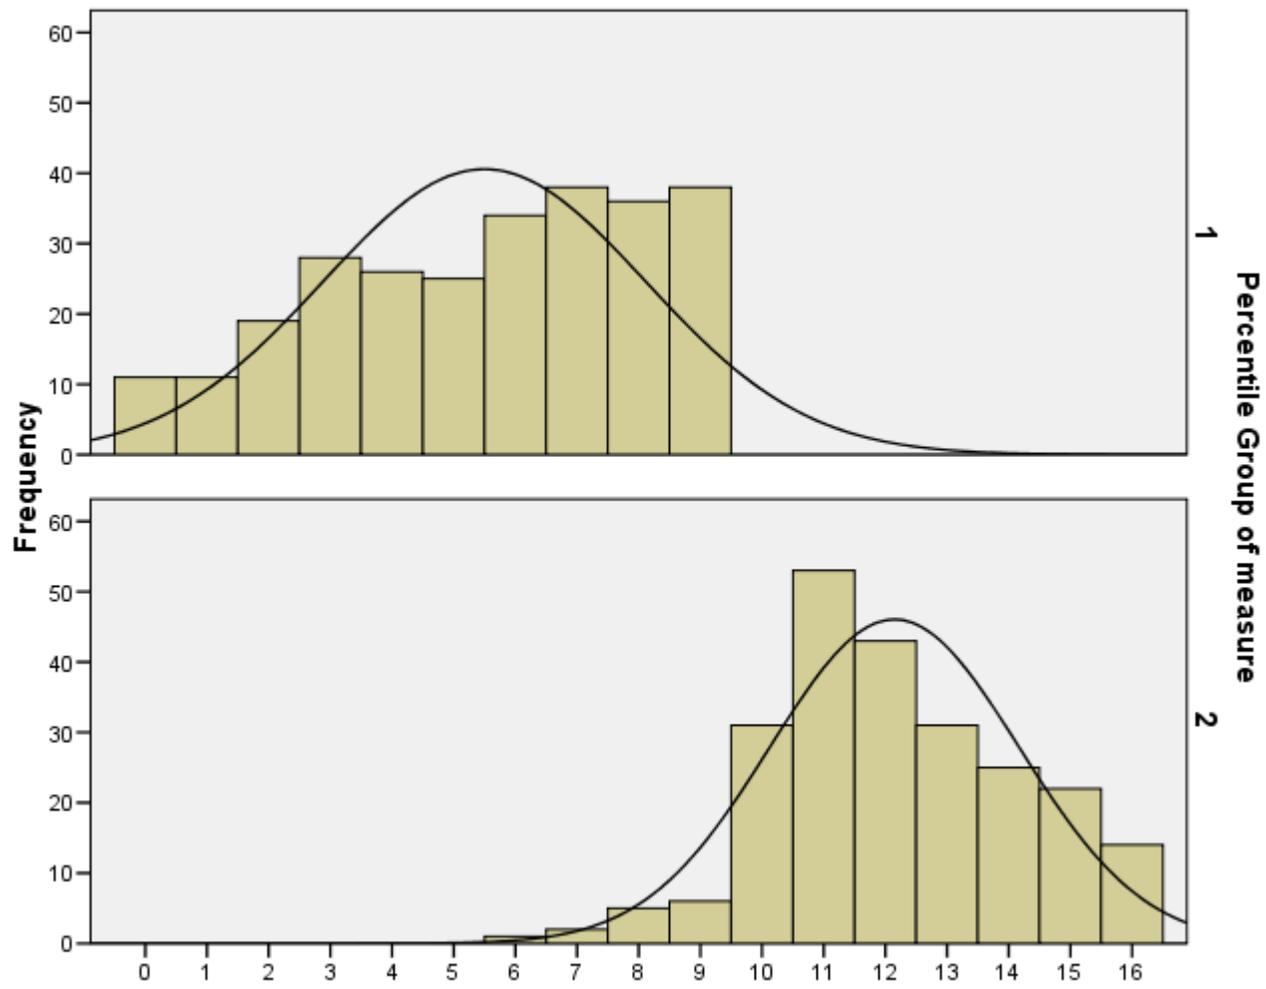

Banco de dados com 499 universitários que responderam ao teste.

Análise clássica

Mean =8,60
Std. Dev. =4,07
N =499

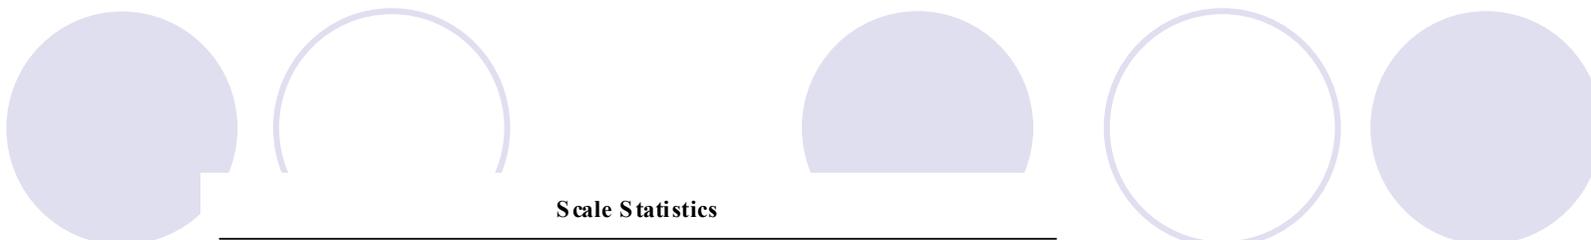

Item Statistics

| | Mean | | Std. Deviation | | N | |
|-----|-----------------------------|-----|-----------------------------|------|-----------------------------|-----|
| | Percentile Group of measure | | Percentile Group of measure | | Percentile Group of measure | |

Scale Statistics

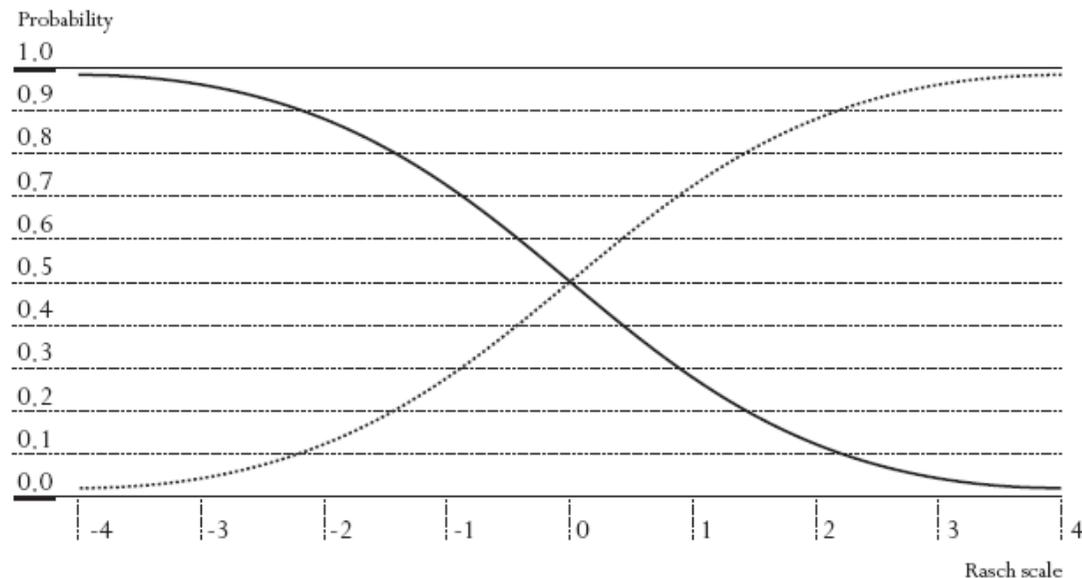

| Percentile Group of measure | Mean | Variance | Std. Deviation | N of Items |
|-----------------------------|-------|----------|----------------|------------|
| 1 | 5,71 | 6,628 | 2,574 | 16 |
| 2 | 12,48 | 3,319 | 1,822 | 16 |

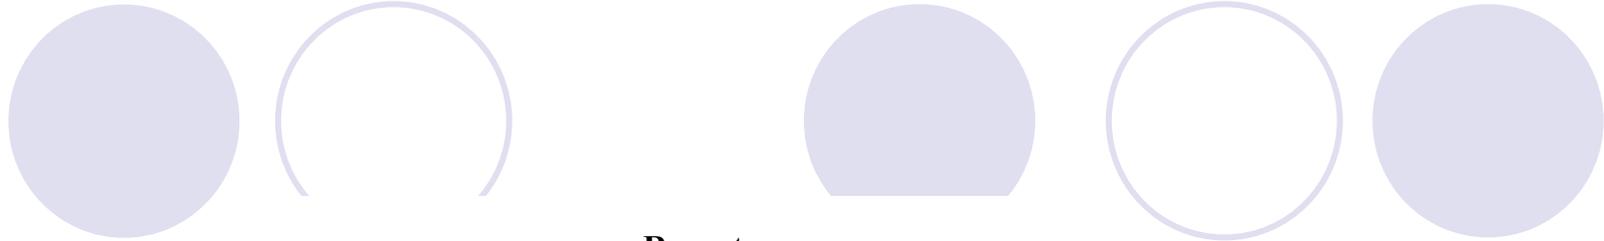

Reliability Statistics

| Percentile Group of measure | Cronbach's Alpha | Cronbach's Alpha Based on Standardized Items | N of Items |
|-----------------------------|------------------|--|------------|
| 1 | ,536 | ,516 | 16 |
| 2 | ,279 | ,260 | 16 |

Transição da psicometria clássica para TRI

- Como a TRI supera essas limitações ? Como podemos entender melhor a TRI a partir do que já sabemos sobre a análise clássica?
- Considere o índice de dificuldade
 - Dependente da amostra: Alta habilidade > Alta probabilidade de acerto, baixa habilidade > baixa probabilidade de acerto
 - $ID = \text{Dificuldade do Item} + \text{Habilidade da Amostra}$
- E se calculássemos vários ID's, em razão dos diferentes níveis de habilidade? Bingo: CCI!
- $ID1 = \text{Dif} + \text{Hab1}$
- $ID2 = \text{Dif} + \text{Hab2} \dots$

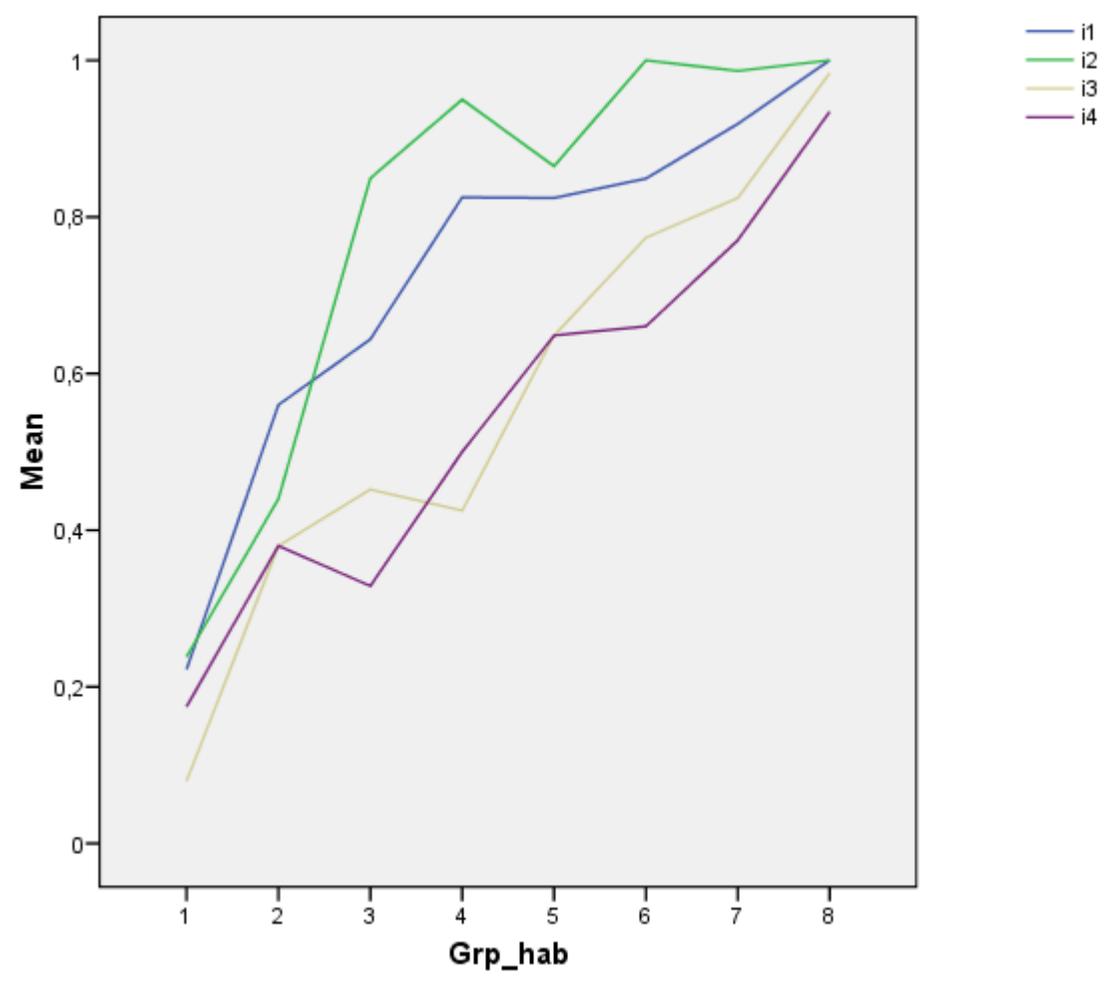

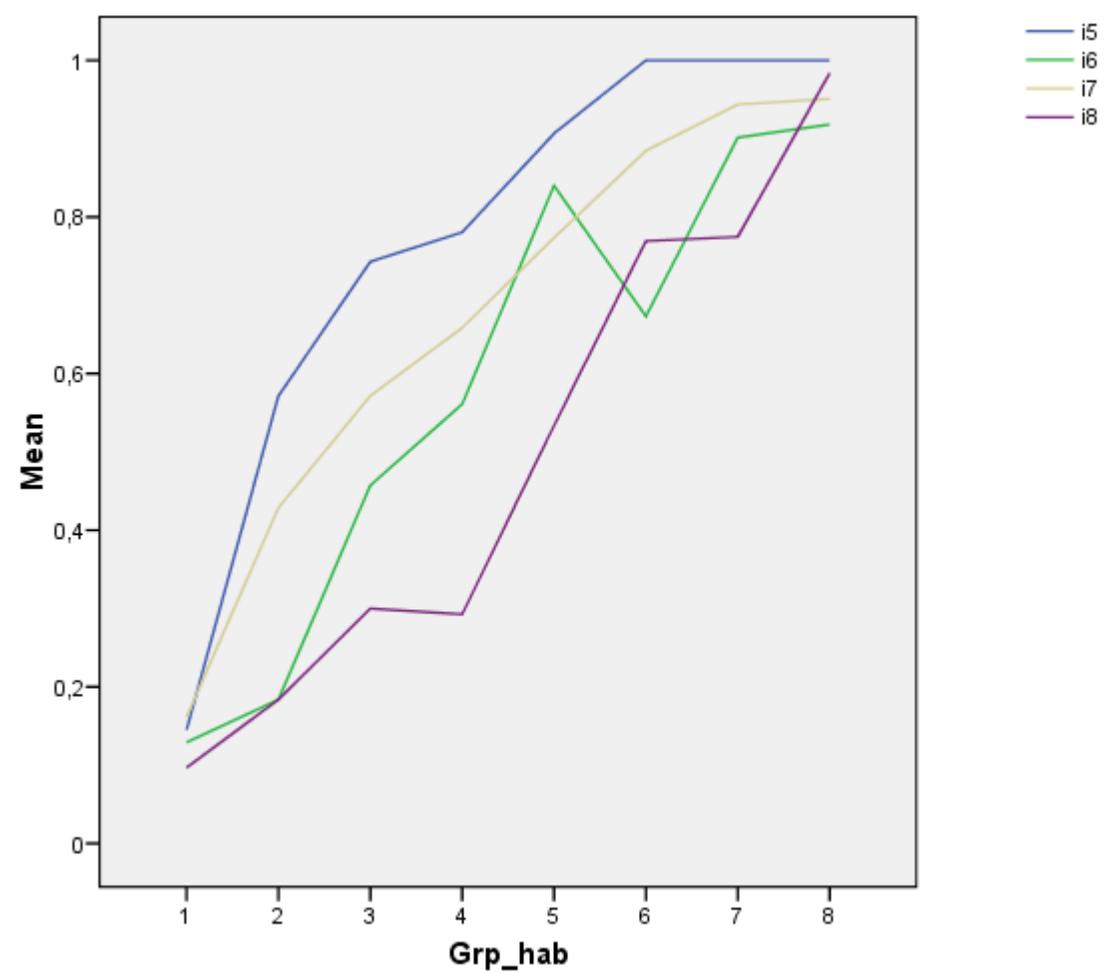

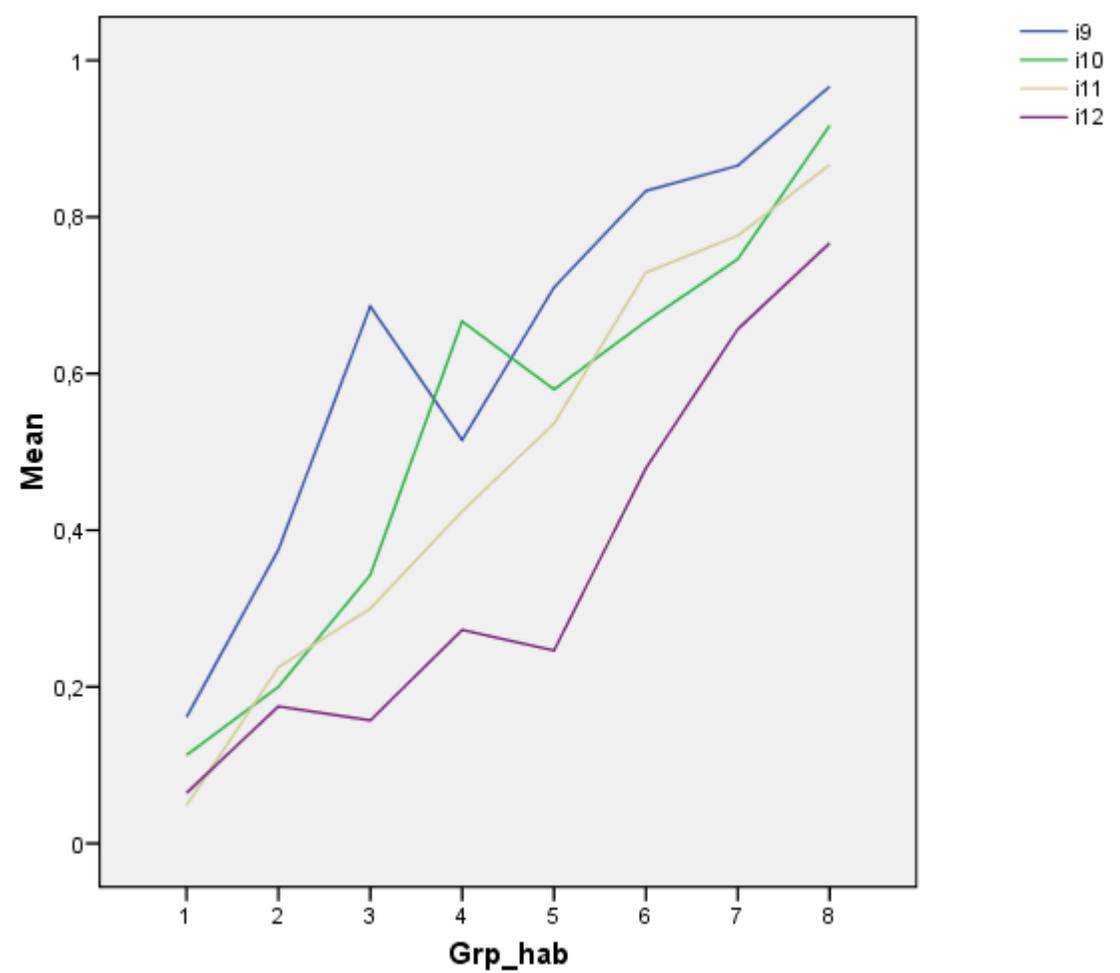

Report

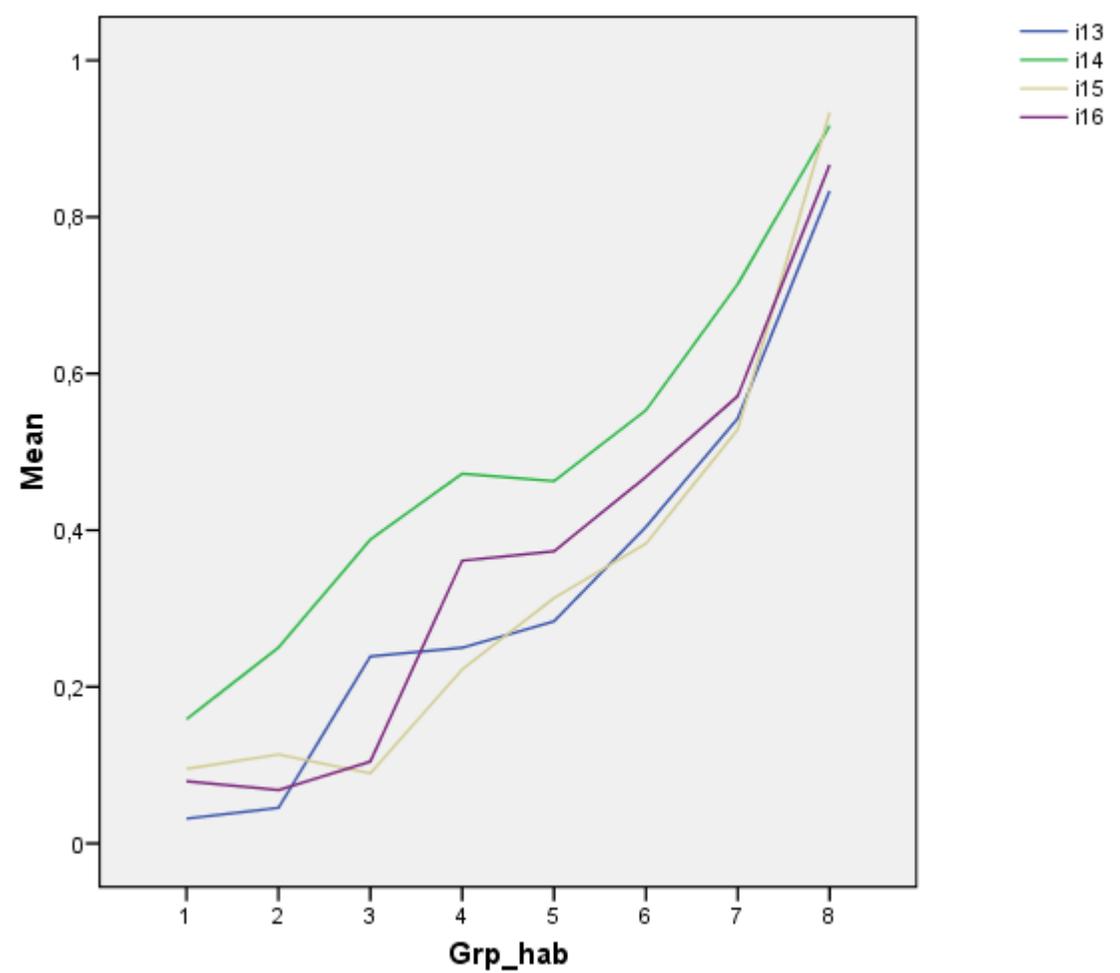

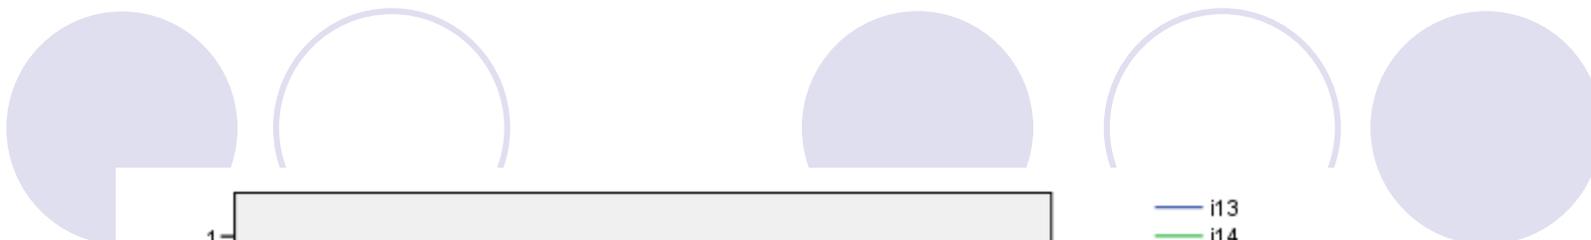

Score used for estimation (TOTALSCORE=N)

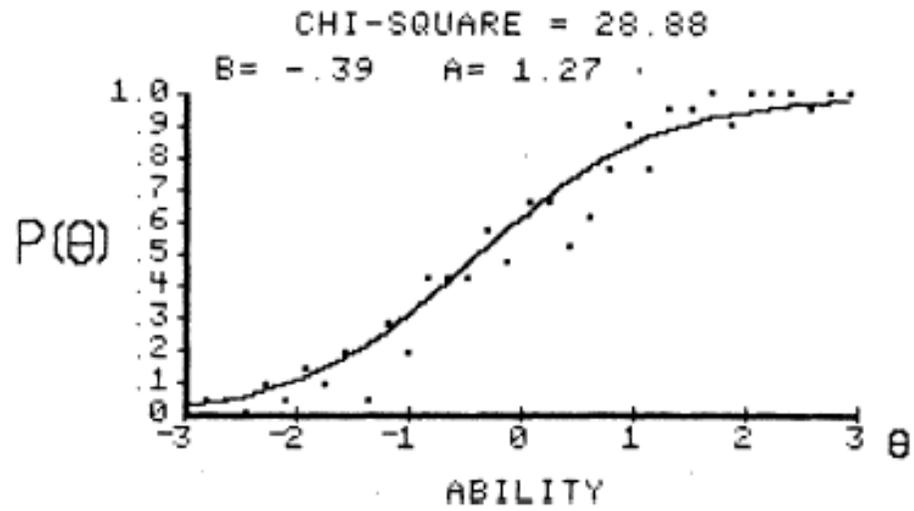

| Grp_hab | Mean | N | Std. Deviation |
|---------|---------|-----|-------------------|
| 1 | 1,9275 | 69 | 1,10239 |
| 2 | 4,4902 | 51 | ,50488 |
